

SETTING UP EPICS, FEATURES, AND USER STORIES FOR PROJECT PLANNING

AIM:

To learn about how to create epics, user stories, features, backlogs for your assigned project.

PROCEDURE:

CREATE EPICS, FEATURES, USER STORIES, TASKS

The screenshot displays the Azure DevOps interface for the 'Appointment_Booking_System Team'. The main view is the 'Backlog' tab, which lists 11 user stories. The sidebar on the left shows navigation options like Overview, Boards, Backlogs, Sprints, and Analytics. The right sidebar shows the 'Planning' view with two sprints and two iterations.

Order	Work Item Type	Title	State	Story...	Value Area
1	User Story	Appointment Booking by Specialization	New		Business
2	User Story	Patient Registration and Secure Login	New		Business
3	User Story	User login and registration	New		Business
4	User Story	Patient Registration and Secure Login	New		Business
5	User Story	Doctor Schedule Management	New		Business
6	User Story	Appointment Booking by Specialization	New		Business
7	User Story	Appointment Notifications	New		Business
8	User Story	Feedback Submission and Appointment History	New		Business
9	User Story	Secure Data Handling and System Monitoring	Active		Business
10	User Story	User registration and login	New	3	Business
11	User Story	Patient Registration	New		Business

Planning
Drag and drop work items to include them in a sprint.

Sprint 1 4/26/2026 - 5/10/2026
Planned Effort: 310 working days
3

Sprint 2 4/26/2026 - 5/10/2026
Planned Effort: 010 working days
2

Iteration 1
No work scheduled yet

Iteration 2
No work scheduled yet

Details

Description

This feature enables secure login and access control for patients, doctors, and administrators. It ensures that users can only access functionalities based on their roles, maintaining privacy and protecting sensitive patient information.

3. FILL IN USER STORIES:

The screenshot displays the Azure DevOps web interface. The browser's address bar shows the URL: `dev.azure.com/pradhikshyaanand/Appointment_Booking_System/_workitems/edit/31/`. The left-hand navigation pane is open, showing a sidebar with icons for Overview, Boards, Work items, Backlogs, Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, Test Plans, and Artifacts. The 'Work items' section is selected, and the 'Appointment_Booking_System' project is chosen. The main content area shows a 'Recently updated' view of a user story. The user story is titled '31 Secure Data Handling and System Monitoring' and is created by 'Pradhikshya Anand'. It is currently in the 'Active' state. The description reads: 'As an admin, I want the system to securely store patient data and monitor system performance, So that data privacy is maintained and system reliability is ensured.' The acceptance criteria are: '- Patient data should be securely stored and protected', '- System should log errors and system activities', and '- Admin should be able to monitor system performance'. The story is assigned to the 'Appointment_Booking_System' area and has a priority of 2. The right-hand pane shows the 'Details' tab, which includes sections for Planning (Story Points, Priority, Risk), Classification (Value area, Business), Deployment (To track releases associated with this work item, go to Releases and turn on deployment status reporting for Boards in your pipeline's Options menu. Learn more about deployment status reporting), Development (Add link: Link an Azure Repos commit, pull request or branch to see the status of your development. You can also create a branch to get started.), and Related Work.

RESULT:

Thus, the creation of epics, features, user stories and tasks has been successfully created.
